ACCELERATE

ACCELERATE BASE PROGRAM:

ACCELERATE + **ENVIRONOC ST**
COMPONENT A *COMPONENT B*

ACCELERATE EARLY SEASON MOMENTUM

The Accelerate Base Program is a two-part seed treatment system designed to give crops a stronger, more consistent start in real world field conditions. By combining two complementary technologies into a single on-seed application, this program supports uniform emergence, rapid root development, and early season nutrient access without adding complexity at planting.

Each case includes two jugs applied together as a complete system.

ACCELERATE
COMPONENT A

- Stimulates beneficial biological activity around the seed.
- Faster and more uniform emergence, especially in cold or stressed planting conditions.
- Serves as a carbon source for beneficial soil microbes, boosting soil structure, aeration, and nutrient turnover.
- Enhanced nutrient cycling in the immediate seed zone.
- Stronger early root signaling that supports later nutrient uptake.

ENVIRONOC ST
COMPONENT B

- Environoc ST complements Accelerate by expanding biological function beyond emergence and into early root development.
- Improved nitrogen availability through free living nitrogen activity.
- Enhanced phosphorus solubilization from insoluble pools.

APPLICATION DETAILS:

ACCELERATE RATE:	0.75 oz/unit of seed
ENVIRONOC RATE:	1.5 oz/unit of seed
CROPS:	Corn, soybean
DELIVERY:	Seed treatment

APPLICATION NOTES:

» Agitate products thoroughly before use. Add 1/2 to 2/3 of the required water to the treatment slurry tank followed by both Accelerate and Environoc ST. Continuous agitation of the slurry mixture is necessary to prevent settling.

PRODUCT TIPS:

» Prevent leaving both components mixed for more than 48 hrs.

STORAGE CONDITIONS:

» Store products in their original containers, securely closed.

» Store out of direct sunlight between 32° F and 90° F.

» Products must be used within six months of opening the container, or within two years of the date of manufacture specified on the product container.
